

WILDLIFE LINE

Our Wildlife line for the garden is made to support this fantastic “wildlife” just outside the window in our gardens. Depending on which kind of garden you have all of us who has a garden can watch these amazing activities going on !

You can help the bio diversity by feeding the birds putting up nest , but also by creating the wild life in your garden!

This visible and invisible life going on from early morning to late night and even during the night a 24 hours activity just outside the window.!

Vildbihus er en ”redkasse” for enlige bier !

Der findes mere end 200 forskellige vildbier i vores fauna, som alle har deres opgaver og hjælper til med at bære pollen fra blomst til blomst.

Disse enlige bier behøver ikke et større bihus, men har brug for tunneler, hvor de kan lægge deres æg. Nogle gange lægger de deres æg i en murvæg med bløde fuger eller i et stykke blødt træ, men nu har vi konstrueret et vildbihus, hvor det er nemt for disse bier at komme ind!

You can find more then 200 different solitary bees in our fauna, which all have different “duties” and are helpers to carry pollen from flower to flower. Solitary bees are non-aggressive. The solitary bees do not need a large house, they need tunnels to place eggs
To take care of solitary bees means:
Increased fruit & vegetable yields-
Efficient pollinators of flower, herbs, fruits and orchards.

Humblebiboet placeret på gulvet i et udhus eller udenfor i jordplan, nær en brændestak eller lignende! Humlebien vil søge ind i den hulstørrelse, der er lavet som indgang og lave et bo. Humlebien har mange ”opgaver” i haven bl.a. til bestøvning af storblomstrende planter. Man kan tilse boet ved at åbne låget !

The Bumblebee Estate can be placed in a outhouse on the floor or outside on the earth level close to your firewood. The bumblebee will search inside because of the right size of the hole and make a living.

The bumblebee has many tasks in the garden.

You can open the roof in order to see inside!
